

Student Voice Group: Vaping and e-cigarettes

Student information sheet

Why am I participating?

Your wellbeing is important to how you learn at school, and a key aspect of your wellbeing is being healthy.

Research shows that the prevalence of e-cigarette use (vaping) among teenagers is on the rise, and we want to understand your view on this. We will use this to make decisions that take student voice into account about how our school approaches vaping education and prevention.

Student voice is more than sharing your ideas and opinions. It is about having the power to influence change.

What kinds of questions will I be asked?

Some of the questions we might ask include:

- What do you know about vaping?
- Where do you get your information about vaping?
- What do you think are student's attitudes towards vaping?
- What are some of the factors that may influence someone in their decision to vape?
- What do you think are some good strategies for vaping prevention?

Will what I say be recorded?

We will take notes of the session, but no names will be recorded in these notes.

What will happen with the information?

We will make a summary of the discussion to help guide our school's delivery of health curriculum and messaging, particularly around the use of e-cigarettes.
